LUXURY FIREPLACES

# Intelligent Simplicity

Designed and manufactured in New Zealand, Escea combines cutting edge contemporary design, high energy efficiency and innovative technology to create a range of world-class luxury fireplaces for use indoors or out.

“Excellence in design coupled with a focus on energy efficiency ensures your new Escea fireplace will become the focal point of your home. The atmosphere created will make your living space the envy of all those who share in its warmth and style; you will congratulate yourself daily for choosing an Escea fireplace.”

Nigel Bamford  
CEO, Escea

SEE-THROUGH FRAMELESS (DX1500)

# Simply Exceptional

Exceptional homes demand exceptional features. No home is complete without the luxurious warmth and soothing ambience of a stylish yet environmentally friendly fireplace in the living space or outdoor entertainment area.

Because a fireplace will always be the centre of attention, it should be beautiful, efficient and easy to use. Escea fireplaces combine innovative contemporary design with quality of the highest magnitude.

Escea fireplaces can be installed just about anywhere. Their zero clearance approvals allow them to be built directly into timber and plasterboard false chimney breasts or existing masonry chimneys. Unlike many other fireplaces on the market, wall construction with expensive heat-resistant materials is unnecessary. Escea indoor fireplaces are approved to be sited directly below a wall-mounted TV screen, allowing enjoyment of the fire and TV at the same time, while offering intriguing design opportunities.

SUEDE CREAM FERRO (ST900)

# Eco-friendly Comfort

For every fireplace built a tree is planted.

Not only does Escea design and produce fireplaces with energy efficiency and environmental impact in mind, but a tree is also planted for every fireplace produced.

eco escea  
TREE PLANTING PROGRAM

SATIN BLACK VELO (DL850)

# Handcrafted Perfection

Every single fireplace that leaves the Escea factory receives the same care and attention as if it were the first.

Designed and manufactured in New Zealand Escea's dedicated team take great pride in finishing fireplaces to the high standard for which they have become renowned, both here and around the world.

BLACK GRANITE VERTA (EF5000)

# Create your perfect fireplace

By combining the interchangeable heating, size and visual elements of an Escea fireplace you are able to create the perfect solution.

310  
COMBINATIONS

## THE ENGINE

---

Defines size, heat output, flue options and control system to match your needs for indoor or outdoor use.

## THE FUEL BED

---

Creates a base for dancing flames and is the heart of the fireplace. From the charm of traditional wood to the purity of modern glass crystals it can be matched to your décor style.

## THE FASCIA

---

Governs how the fireplace integrates with your room while at the same time focusing your attention to the flames.

## STEEL FASCIAS

The Ferro range of fascias stylishly frames the Escea flame and unique fuel bed options.

### COLOUR COATED

A wide variety of colours are available for this fascia, allowing you freedom and versatility in matching your décor.

### STAINLESS STEEL

Striking, clean lines are coupled with a stunning stainless steel surface which reflect the colours, textures and shapes from within the room, creating a look that instantly is at one with the living space.

# Verta

## STAINLESS STEEL FASCIAS WITH INSERTS

The high grade stainless steel Verta fascia comes with a variety of inserts that create a wonderfully personalised effect.

The range of attractive inserts include natural stone – granite and travertine – and ancient Kauri wood from Northland. Alternatively, to match your room décor, supply your own inserts.

### VERTA FASCIAS ARE AVAILABLE WITH:

KAURI**

These unique Kauri inserts are made from wood preserved in the swamps of New Zealand for thousands of years. Ten times older than the Egyptian pyramids, this wood has been carefully removed and lovingly cut and polished for discerning owners. Each fascia comes with a certificate authenticating the Kauri inserts as being over 30,000 years old.

ANCIENT KAURI VERTA (ST900)

# Molaris

NATURAL STONE FASCIAS

The Molaris fascia is a thick slab of natural stone that floats off the wall.

These natural stone fronts add substance and tradition to the fireplace, while at the same time keep the simple modern look that epitomises Escea.

CREAM TRAVERTINE MOLARIS (ST900)

# Velo

## PICTURE FRAME FASCIAS

The Velo fascia is a frame within a frame, creating a minimalist look, thanks to clean straight lines.

The Velo bevelled look creates a picture frame, drawing one's eyes to the flames whilst at the same time maintaining a minimalist look. The fascia subtly protrudes from the wall and can be installed floating on the wall or optionally sitting on a hearth.

An optional deflector screen is available for some models which increases the contrast of the flames and virtually eliminates reflections. The screen also offers additional protection, making it harder for young fingers or clothing to touch the hot glass.

### VELO FASCIAS ARE AVAILABLE WITH:

METALLIC SILVER VELO (IB1100)

# Rado

## INSET FASCIAS

The Rado fascia fits right into your surround giving a flush (or recessed) minimalist profile.

Fitting the fire directly into its surrounding allows you to exercise your creativity and select exotic wall materials to create your own individual feature.

An optional deflector screen is available which increases the contrast of the flames and virtually eliminates reflections. The screen also offers additional protection, making it harder for young fingers or clothing to touch the hot glass.

### RADO FASCIAS ARE AVAILABLE WITH:

	<b>DL850</b> Indoor Fireplace	<b>IB1100</b> Indoor Fireplace	<b>IB850</b> Indoor Fireplace

Satin Black

SATIN BLACK RADO (IB1100)

# Quadrato

## SQUARED FASCIAS

The Quadrato fascia resembles a solid double picture frame, making a strong impression with its square geometric shape.

Sitting out from the wall, this fascia appears to float, with strong clear edges. Sharp lines provide a strong and graphic design feature as the focal point of the room.

An optional deflector screen is available which increases the contrast of the flames and virtually eliminates reflections. The screen also offers additional protection, making it harder for young fingers or clothing to touch the hot glass.

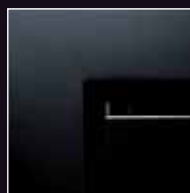

QUADRATO FASCIAS ARE AVAILABLE WITH:

# Frameless

ABSOLUTE MINIMALIST DESIGN

When the wall surrounding a fireplace is itself a work of art, no additional adornment is needed, making the frameless option a perfect choice.

Eliminating the frame leads the eye towards the flames, turning the entire feature wall surrounding the fireplace into an attention-grabbing frame.

The frameless option gives you the freedom to choose a look for the fireplace that is truly unique. With Escea you have this choice for both the ultra-wide indoor gas fireplace and the outdoor cooking fire.

FRAMELESS LOOK IS AVAILABLE WITH:

	<b>DX1500</b> Indoor Fireplace	<b>EW5000</b> Outdoor Cooking Fire
Frameless	Yes	Yes

FRAMELESS (DX1500)

# See-Through

THROUGH THE WALL DOUBLE SIDED FIREPLACE

One fireplace that faces two adjoining rooms adds more charm, light and warmth to both, while giving the effect of turning two rooms into one.

If you can tear your eyes away from the flames dancing over the delicately modern Crystalight fuel bed, you can see through the flames into the other room.

You can choose to place the DX1500 fireplace within the wall without any frame or use either of the two minimalistic single-framed Velo fronts.

## FINISHES

SEE-THROUGH METALLIC SILVER VELO (DX1500)

# Indoor Flames

We all love the comforting, mesmerising effect that flames bring to our rooms. The ambience and wellbeing created by the sight of flames and glowing fuel bed cannot be overestimated.

Escea gas fireplaces offer an impressive display of flames, even when turned down low. Because we each have our own individual preferences, Escea offers a large range of fuel beds to choose from.

CREAM TRAVERTINE VERTA (EF5000)

# Indoor Gas Fireplaces

Combine your favourite fascia and fuel bed with the most suitable fireplace for your home.

## DX1500

HIGH EFFICIENCY FIREPLACES (GAS)

Setting new standards in gas fireplaces, the Escea DX1500 combines 1500mm width flame, up to 5 Star efficiency\*, Heat Ducting Technology and Escea's exclusive Smart Heat control system to create the most sophisticated ultra wide fireplace on the market.

Just the sheer width of the flame pattern creates an impressive, dramatic statement that looks great single sided; but looks even more spectacular with Escea's double sided see-through option.

The DX1500 captures up to 90% of the available heat and returns it back into the room via Escea's Heat Ducts. This system ensures that the heat travels to the far ends of your room, providing quiet and complete room heating. You can even duct some of the heat into the hallway to warm the bedroom end of the home.

The DX1500 uses Escea's latest Powered Direct Vent flue technology which allows both horizontal and vertical flue runs.

In addition to the Escea Velo fascia the DX1500 offers a frameless look so a special focal point can be created with the imaginative use of wall materials.

The DX1500 comes supplied with reflective side panels to mirror the flames dancing over the unique Crystalight fuel bed or wood pieces.

### DOUBLE SIDE SEE-THROUGH OPTION

The DX1500 double sided will create a great visual statement in not one, but two rooms. This fireplace can also be used in a double sided island to create the perfect way to split a large room into smaller more intimate spaces.

SATIN BLACK VELO

### SINGLE SIDE IN WALL OPTION

Not all of us need a double sided fireplace, and in its single sided variation the DX1500 still creates a strong focal point even in the largest of rooms.

DX1500

FRAMELESS (DX1500)

# Indoor Gas Fireplaces

Combine your favourite fascia and fuel bed with the most suitable fireplace for your home.

## DL850

HIGH EFFICIENCY FIREPLACES (GAS)

The DL850 gas fireplace is a perfect balance of high performance, 4.6 star efficiency\* and new generation control technology, coupled with the stunning beauty that is Escea.

The DL850 points the direction for the future of gas fireplaces while at the same time following on from the highly regarded IB Series. While looking similar to the IB850 the DL850 is deceptive. Redesigned from the base up this fireplace outperforms IB850 in all areas. It is more efficient, has a higher heat output, and is quieter. Escea's new generation Smart Heat controller coupled with Escea's new Powered Vent Technology leaves you in control.

With 9.2 kW of heat output and up to 4.6 Star efficiency\* this fireplace generates enough heat to quickly heat up the largest of rooms, making it perfect for the average sized home.

The DL850 uses Escea's latest Powered Direct Vent flue technology which allows both horizontal and vertical flue runs. The DL850 flue can even run under the floor to create an island in the middle of your room.

The DL850 accept a wide range of the Escea fascias and fuel beds allowing you to perfectly match your décor.

### FEATURES

---

ENERGY INPUT (on high): 38 MJ/hr

---

\*Star efficiency varies depending on flue configuration.

### IN WALL INSTALLATION

The size of DL850 makes it a popular option for a standard sized room. It looks great when located under the TV in the lounge, but your choice is wider than that. The fireplace allows flexibility in your décor. It can either sit out from the wall with a Velo or Quadrato fascia or can be recessed into the wall with the Rado front.

### ISLAND INSTALLATION

Because the Powered Direct Vent on the DL850 allows the flue to be run under floor, there is the opportunity for a more creative installation such as placing this fireplace in an island in the middle of the room.

METALLIC SILVER VELO (DL850)

# Indoor Gas Fireplaces

Combine your favourite fascia and fuel bed with the most suitable fireplace for your home.

## IBSeries

HIGH OUTPUT FIREPLACES (GAS)

Escea's IB Series gas fireplaces combines significant heat for the largest of living areas with the great looks of Escea.

The IB fireplaces are high heat output units capable of quickly heating a large area. Once a comfortable temperature has been reached the unit's thermostat reduces the gas input to maintain your comfort. The IB models come with wireless remote and the option of control via mobile phone or the internet.

These powerful heat engines can be combined with a selection of three distinctively designed fascia styles: Velo, Rado or Quadrato. The Escea styled minimalistic fronts with their clean straight lines create a luxurious look.

i-con remote switching allows you to turn your IB series fireplace on remotely using a mobile phone or the internet. You can use it to turn on your fireplace as you are leaving work so you arrive home to a toasty warm house. This optional feature can be fitted either before or after installation into any IB Series fireplace.

FLORENTINE BRONZE VELO

## IB1100

The IB1100 is the widest of the IB series fireplaces. Whether you have a big room, a big flat screen TV or just want to make a stunning visual statement, this is the fireplace for you. As well as the stunning appearance, it will definitely provide you with all the warmth you need on cold winter days.

METALLIC SILVER QUADRATO

## IB850

The IB850, whilst narrower than the IB1100, is still a fireplace that offers a great wide-view flame area as well as enough heat to keep even the largest living areas toasty warm. The IB850 can be used as an in-wall fireplace or inside a Free Standing Unit (see page 38).

SATIN BLACK VELO

## IB600

Smaller rooms and houses with limited wall surface can also feature an Escea modern fireplace. The IB600 answers these needs and is also the perfect gas fireplace for installing in brick chimneys as a replacement for an existing open wood fireplace.

METALLIC SILVER VELO (IB850)

# Indoor Gas Fireplaces

Combine your favourite fascia and fuel bed with the most suitable fireplace for your home.

## ST Series

LOW ENERGY CONSUMPTION FIREPLACES (GAS)

The sleek ST Series gas fireplaces use only a small amount of energy and offer flexibility in design and installation.

The ST Series fireplaces look great and there is a stunning range of fascia and fuel effects available. These fireplaces use only 1/3 of the gas of an equivalent size open fireplace and are completely silent in operation. They are ideal for adding ambience and additional warmth to a house using a heat pump or underfloor heating.

Thanks to its shallow depth, direct vent flue system and zero clearance rating, the ST Series models can be installed almost anywhere (even in bedrooms).

With an optional battery pack the ST Series fireplaces still operate during power outages.

### FEATURES

ZERO CLEARANCE

DIRECT VENT

### ADVANCED REMOTE CONTROL

ST Series heat engines come with a battery-powered wireless remote control. This can be used to light the fire and to adjust the flames. A built-in thermostat allows the desired room temperature to be set. The remote also offers a 7-day timer for automatic control of the fireplace.

\*Depending on the flue configuration

ANTIQUE STEEL FERRO

### ST900

The ST900 fireplace retains the popular landscape format and offers low energy consumption while providing a mesmerising effect.

With a large range of fascia choices it adapts to your interior design needs like a chameleon – from a variety of colours through to wood and stone finishes. The range of contemporary fuel beds offers further choice to help you achieve exactly the right look.

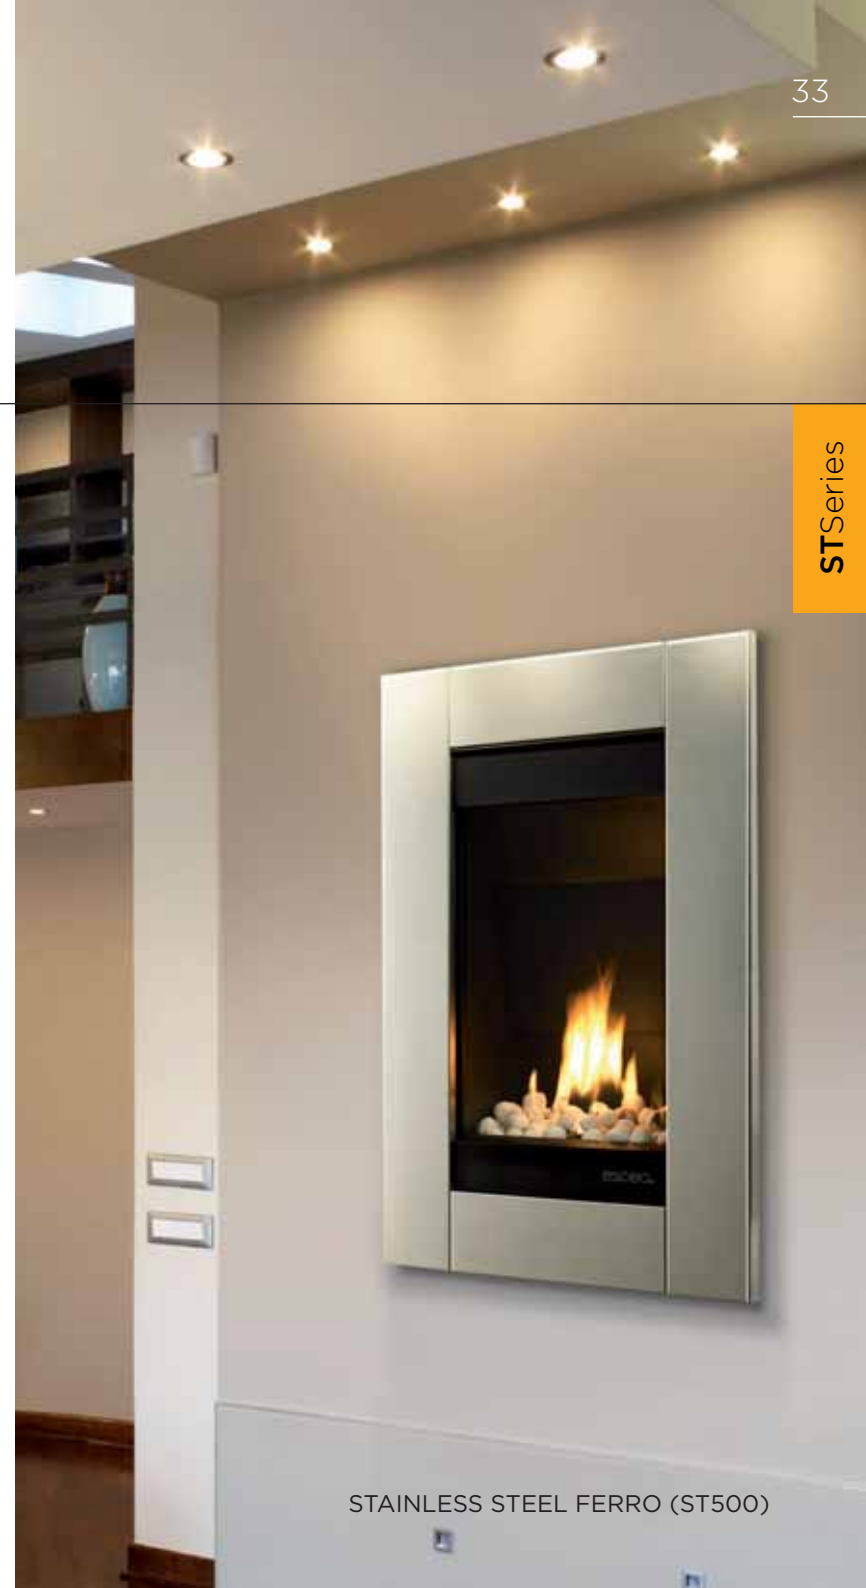

SATIN BLACK FERRO

### ST500

The ST500 low consumption fireplace is offered with a portrait style firebox.

It slips conveniently into corners, and is ideal for smaller rooms that don't lend themselves to a wide aspect fire. Together with Ferro fascias in a vertical aspect, you achieve a slim and stylish look.

STAINLESS STEEL FERRO (ST500)

# Outdoor Gas Fireplaces

Combine your favourite fascia and outdoor flame effect to build your personalised warm outdoor living area.

## ESeries

OUTDOOR FIREPLACES (GAS OR WOOD)

Just because it's a little cool outside it doesn't mean you have to stay indoors. Escea outdoor gas or wood fireplaces let you enjoy the open air whilst still staying warm.

The Escea outdoor fireplaces create a dramatic centre point to any outdoor gathering, adding sophistication and ambience to any occasion.

The EF5000 is a great looking gas fireplace designed for quick convenient heat at the push of a button. Whether you are planning on entertaining all night or are just wishing to unwind after a day at work, the EF5000 gas fireplace is ideal.

If you prefer the sight, smell and crackling of an open wood fire, and love to cook outdoors then the EW5000 outdoor cooking fire is the one for you. For long life, Escea constructed its firebox of high quality 4mm thick steel. The EW5000 requires a fully non-combustible structure such as masonry, stone, concrete or brickwork and also requires a standard flue.

	EF5000	EW5000
FASCIA OPTIONS	Ferro, Verta	Ferro, Frameless
FASCIA SIZE	(Ferro) 1290 x 645	(Ferro) 1290 x 645

ENERGY INPUT (on high)	60 MJ/hr	NA

### FEATURES

ZERO CLEARANCE  
(only EF5000)

STANDARD FLUE  
(only EW5000)

### CONTROL PANEL

The EF5000 comes with a push button control panel discreetly situated on the right side of the stainless steel fascia. From here you can ignite the fireplace as well as adjust the flame height for extra warmth and viewing pleasure.

### COOKING PLATE

To allow you to enjoy BBQ cooking, the EW5000 features a cooking plate which can be placed at three different heights to regulate the heat. When not in use, the plate can be conveniently stored under the ash pan.

STAINLESS STEEL FERRO  
(EF5000)

### EF5000 (GAS)

The innovative design of this fireplace means no flue is required. Because this gas fireplace is zero-clearance, it can be installed straight into any timber-framed external construction, suitable wall or masonry cavity. To protect the gas burners from rain, wind and debris an optional weather shield can be ordered.

FRAMELESS (EW5000)

### EW5000 (WOOD)

The EW5000 outdoor wood fire can be installed with or without the Stainless Steel Ferro fascia. The fascia-less look gives a more traditional option and can be installed flush or recessed into your non-combustible fire surround.

For a long life, the firebox is constructed of high quality 4mm thick steel coated with heat resistant paint.

STAINLESS STEEL FERRO (EF5000)

# High Tech Features

## SmartHeat

---

This great new control system by Escea allows you to control your fireplace in ways previously never before available.

Escea's unique Smart Heat system allows each fireplace to connect to the internet via either a cable or optional Wi-Fi module. You can then turn on your fireplace from any location via a secure web screen or through our iPhone or Android smart phone app. On cold nights you can turn your fireplace on as you begin the drive home so your house is warm and inviting on arrival.

The Smart Heat system constantly monitors the temperature in the room and makes adjustments to the fireplace to ensure the room is kept at the exact temperature you have requested. It will automatically ramp the heat output and the room air fan up and down through an infinite range of speeds so the fan is never running too fast or too slow. This makes the fireplace extremely energy efficient and quiet.

You have the option of downloading a free iPhone or Android application so your personal smart phone can instantly become your new fireplace remote controller. Now that's smart!

The Escea Smart Heat controller which is standard for the D Series fireplaces is compatible with most home management systems.

AVAILABLE FOR

DX1500

---

DL850

---

## Heat Ducting Technology

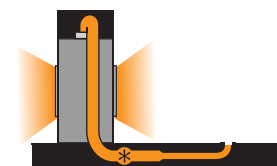

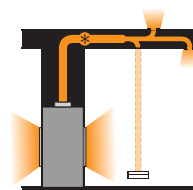

Escea's unique Heat Ducting Technology pushes the fireplace's warmth to the farthest reaches of a room, boosting the efficiency and heat output of the DX1500.

The ducts transport warm air through ceilings, walls and floors, circulating heat not just within the room, but throughout the house and even between levels. The main duct pipe runs from the fireplace either over the ceiling or under the floor, with the warm air released up to 12 metres away through ceiling, floor or wall outlets.

The advanced technology automatically adjusts the heat output and speed of the inline fan so that the room remains at the constant temperature you desire. The system improves the air transfer within your home by heating the entire space evenly before recirculating room air back through the fireplace. Room air is not used for combustion at any point of time thanks to Escea's Powered Direct Vent.

The heat duct system is so flexible that the fireplace can be placed almost anywhere, providing unlimited installation options.

AVAILABLE FOR  
DX1500

# Install Options

Escea develops products to make installation simple and allow you flexibility in choosing the location of your fireplace. Escea also constantly trains gas fitters around the country so they are familiar with models and all their technical details.

## Enclosures

### FREE STANDING UNIT

The Free Standing Unit (FSU) has been designed for rooms that do not lend themselves to an 'in-wall' fireplace. It is also ideal for houses with a large area of glass, that results in limited wall space.

This unit works with the standard IB850 fireplaces, and comes in a variety of powder coated finishes to suit any décor. The dimensions for FSU are: 1345w x 850h x 565d (mm)

AVAILABLE FOR

IB850

### ZERO CLEARANCE

All Escea fireplaces (except the EW5000) are rated zero clearance, so you will not need to build an expensive fire rated wall construction. You can install your Escea fireplace directly into a plasterboard timber framed cavity.

Thanks to this feature you can safely install a TV above all indoor Escea fireplaces.

AVAILABLE FOR

All fireplaces except the EW5000

### KITSET ENCLOSURE

Escea can provide a ready-to build enclosure for your outdoor fireplace. The Kitset Enclosure (KSE) consists of a ready-to-be-assembled steel frame skeleton and fastenings. Once assembled you can then cover the KSE with a non-combustible waterproof backing board and cladding of your choice. The assembled structure has the following dimensions: 1800w x 1200h x 600d (mm).

AVAILABLE FOR

EF5000

EW5000

# Flues

## NATURAL DRAFT FLUE

The IB Series flue system is based on a 100mm diameter inner liner and can be offset and extended in several different ways. It is suitable for installation in timber framed structures. For installation in existing masonry Escea offers a flexi flue. Flexi flue easily follows the contours of the existing structure and can be extended up to 15 metres.

The flue for the EW5000 Outdoor Cooking Fire offers the same features as standard IB Series Flue but comes with a wider 250mm pipe.

AVAILABLE FOR

IB SERIES

EW5000

## D SERIES POWERED DIRECT VENT

Escea's Powered Direct Vent is a balanced flue that uses an externally mounted fan unit that is controlled by the fireplace's Smart Heat control system. Two flexible pipes run from the fireplace to the fan unit; one removing spent combustion air from the fireplace, the other bringing in fresh air for combustion from the outside.

For horizontal termination the external components are housed in a slim-line stainless cowl which presents a minimal visual profile.

This system is also available with a vertical termination option that allows for through the roof installation.

AVAILABLE FOR

DX1500

DL850

## IB SERIES POWER FLUE

This accessory kit can be fitted to any IB Series gas fireplace. It allows the flue to terminate on a vertical wall so you do not need a flue system that runs up through the roof. It is ideal for houses without an existing chimney.

A power flue system allows you to run a flue horizontally for up to 6m. This allows you to position the fire on an internal wall, and if a vertical flue is not possible, to link it to a flue on an external wall.

AVAILABLE FOR

IB Series

## ST SERIES DIRECT VENT

Escea can provide direct vent flue systems for its ST Series fireplaces. Direct vent fireplaces are "sealed combustion systems". That means the air for combustion is delivered through the venting system from outside.

Direct vent systems offer many options for siting the fireplace and routing the flue because they can terminate either up and through a roof or simply out through an external wall directly behind a fireplace. A combination of both horizontal and vertical flue run is also possible.

AVAILABLE FOR

ST Series
